Note: Do NOT assign technicians when moving tickets to **Payroll, Benefits** or **Finance**. They will do the triage.

Note: When reassigning a request to a different application & you know the technician that should be working on the issue, add that person as a contact on the request. Prior to assigning a workflow, update the request with a new comment– notifying the specific technician you just added as a contact–letting them know that you are reassigning the request to their application.

For tickets relating to:
